THE PRESIDENT'S OFFICE
REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT
LONGIDO DISTRICT

FORM ONE TERMINAL EXAMINATION
COMPUTER SCIENCE

MARKING SCHEME MAY 2025

SECTION A (15 MARKS)

1.

Items	i	ii	iii	iv	v	vi	vii	viii	ix	x
Answers	C	D	C	C	C	B	D	C	C	C

@01 Mark, =10marks

2.

LIST A	i	ii	iii	iv	v
LIST B	C	F	D	B	E

@01 Mark, =5marks

SECTION B (70MARKS)

3. (a) Five classification of computers based on performance or capability. (@1mark=5marks)
   i. Super computer; the most powerful computers, capable of processing trillions of instructions or data per second. Example IBM summit-used in climate modeling, nuclear research.
   ii. Mainframe computers; high performance computers that handle massive data and support hundreds of users simultaneously. Examples IBM z16-used in banking and airline reservation system.
   iii. Minicomputers 9Mid-range computers); Multi-user systems, smaller than mainframes, used by small and medium enterprises. Examples DEC PDP-11-used in manufacturing and business environments.
   iv. Microcomputers or Personal computers; these are generally purpose computers for personal or office use. Suitable for word processing, internet and media. Examples HP Desktop, Lenovo Laptop.
   v. Work stations; more powerful than microcomputers, used for tasks requiring high graphical and computational power. Examples Dell Precision-used for CAD, 3D modeling, and video editing.

   (b) Oder of increasing the performance (@1mark=5marks)

Microcomputers → Workstation → Minicomputer → Mainframe → Supercomputer

4. The long form and functions of the following abbreviations (@1mark=10marks)
   i. HDD Hard Disk Drive Stores large amounts of data permanently

ii. SSD	Solid State Drive	Stores data faster than HDD
iii. PSU	Power Supply Unit	Converts electricity to power the computer
iv. CPU	Central Processing Unit	Executes instructions and processes data
v. ALU	Arithmetic Logic Unit	Performs arithmetic and logical operations
vi. RAM	Random Access Memory	Temporarily stores data for active programs
vii. ROM	Read Only Memory	Holds startup instructions (firmware)
viii. VGA	Video Graphics Array	Sends images to a display device
ix. CAD	Computer Aided Design	Used for design and drafting in engineering
x. CAM	Computer Aided Manufacturing	Controls machinery in manufacturing

5. Recommendation for school computers (@2mark=10marks)
   The school should buy microcomputers (Desktops)
   i. Affordable and suitable for a tight budget
   ii. Capable of handling educational software
   iii. Easy to upgrade and repair
   iv. Support standard applications for teaching
   v. Available in bulk for classroom setup

6. Importance of Microprocessor Development (@2mark=10marks)
   i. Reduced computer size significantly.
   ii. Lowered production and maintenance cost
   iii. Increased processing speed and efficiency
   iv. Allowed development of personal computers
   v. Enabled portable computing devices (laptops, tablets)

7. **System Software vs Application Software**(@2mark=10marks)

Feature	System Software	Application Software
Purpose	Manages computer hardware	Helps users perform tasks
Examples	Windows, Linux, macOS	Word, Excel, Photoshop
Functionality	Operates the computer	Solves specific user problems
Installation	Comes with the system	Installed as needed
User Interaction	Runs in the background	Used directly by users

8. (a) **Advantages of computerizing library systems**
   i. Faster data retrieval and updates
   ii. Reduces paperwork and human error
   iii. Easy tracking of borrowed and returned books

(b) i. Components

A. Input device

B. Control Unit

C. ALU

D. Main memory

E. Auxiliary memory

F. Output device

ii. **Two functions of the Central Processing Unit (CPU): (2marks @1mark)**

a) **Data Processing:** Performs calculations and logical operations.
b) **Control Operations:** Manages and coordinates computer components

iii. **Four devices that act as Input Devices (Part A): (2marks @0.5mark)**

a) Keyboard
b) Mouse
c) Scanner
d) Microphone

9. **Use of Robotics in Manufacturing**(@2mark=10marks)

i. Increase production speed
ii. Improve product quality and consistency
iii. Reduce labor costs
iv. Operate in dangerous environments
v. Work continuously without fatigue

SECTION C (15 MARKS)

10. **How Computer Science Improves Teaching and Learning**

Any related points can be used.

a) Good Introduction (2.5marks)
b) Main body
   - Any five points and example @ 2marks=10marks.
c) Good conclusion (2.5Marks)

- Computer science has transformed education by enabling
  i. Digital classrooms,
  ii. Access to resources,
  iii. Enhance teaching methods
  iv. To use computer prepare lessons
  v. Presentation of contents.
- **Examples of software/platforms:**
  - Google Classroom: Online teaching and assignment submission
  - Moodle: Open-source learning management
  - MS Teams & Zoom: Virtual classroom and conferencing
  - Khan Academy: Free online learning
  - Microsoft Office: Preparing notes and presentations
