THE UNITED REPUBLIC OF TANZANIA

PRESIDENT'S OFFICE-REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT

FORM ONE GEOGRAPHY MARKING SCHEME

1.

I	II	III	IV	V	VI	VII	VIII	IX	X
B	A	A	D	C	A	A	B	A	A

@ 1 MARK.

2.

I	II	III	IV	V	VI	VII	VIII	IX	X
H	B	K	C	F	I	D	N	O	Q

@ 1 MARK.

3.

I	II	III	IV	V	VI	VII	VIII	IX	X
TRUE	TRUE	FALSE	FALSE	FALSE	TRUE	TRUE	FALSE	FALSE	TRUE

@ 1 MARK.

4. i). Revolution: is the movement of one body around another. WHILE
Rotation: is the spinning of the body on its own axis. 5 MARKS

ii) Aphelion: is the furthest position of the earth from the sun. WHILE
Perihelion: is the closest position of the earth to the sun. 5 MARKS

iii) Local time: Is the time recorded along the same meridian WHILE
Standard time: Is the local time of the central meridian. 5 MARKS

iv) Time zone: is the stretch of the land where standard time is accepted throughout a longitudinal zone of 15 degrees in width. WHILE
International date line: is a line where each new day begins generally following the 180 degrees. 5 MARKS

5. SOLUTION

Data given:
Colombian latitudinal points 40 degrees east
Colombian time: 4:00pm
Mtwara latitudinal points 40 degree east
Mtwara's time? @ 0.5 MARK
1 degree = 4minutes
80 degrees =?
1 degree × x = 80 degree × 4 minutes
X = 320 minutes @ 1 MARK.
But;

1hr =60min

X = 320 min

$\frac{1hr \times 320\ min}{60\ min} = \frac{60\ min}{60\ min}$

=5:03

5:03

- 4:00

1:01

Therefore the time of Mtwara is 1:01

@ 0.5 MARK.

2 MARKS.

6. SOLUTION

Data given;

Nairobi's latitudinal point is 45 degree

Nairobi's time is 9:00am

Lagos' time is 3:00am

Lagos' latitudinal point is?

@ 0.5 MARK

9:00

-

3:00

6:00

1degree = 4 minutes

? =360 minutes

$\frac{360\ minutes \times 1\ degree}{4\ minutes} = \frac{4\ minutes}{4\ minutes}$

@ 1 MARK.

360/4

90 degrees

But;

90 degrees – 45 degrees = 45 degree west

@ 0.5 MARK

Therefore the latitudinal points of Nairobi is 45 degrees west 2 MARKS

7. i) The following are the results of rotation:

a) Day and Night.

b) Deflection of winds from its normal path.

c) High tides and low tides.

d) Time differences between longitudes.

5 MARKS

ii) The following are the results of revolution:

a) Seasons of the year.

b) Varying of length of day and night.

c) Occurrence of eclipses.

d) The overhead of middy day's sun. 5 MARKS

8a) The following are the evidence that the earth rotates:

i) Lunar eclipse.

ii) Occurrence of day and night 5 MARKS

b) The following are the differences between the latitude and longitudes:

LATITUDE	LONGITUDE
Latitude is used in the determination of weather and climate.	Longitudes are used to calculate time.
Latitudes never meet	Longitudes meets
Latitude have maximum degrees of 90	Longitudes have maximum degrees of 180

5 MARKS

9. a) The following are the characteristics of the Great Circles:

i) The radius of the circle is the same as the radius of the earth.

ii) All Great Circles divide the earth equally into two hemispheres.

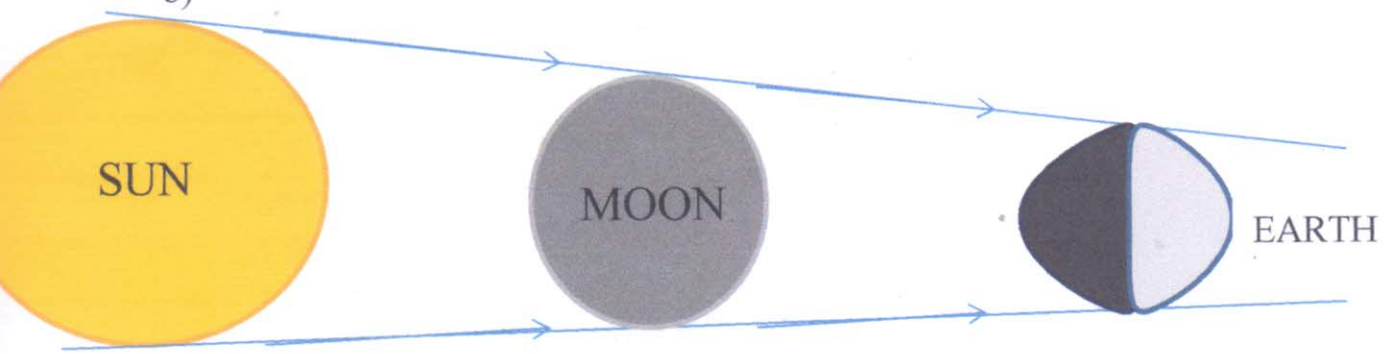

iii) Great circles have equal distances. 5 MARKS

b) Great circle are used in ships and aircrafts because they are used to find short distances of aviation (in aircrafts) and navigation

5 MARKS

10. a) Solar eclipse: this is the geographical phenomenon which occurs when the moon is between the earth and the sun.

b)

5 MARKS
