SECTION A (15 MARKS)

Answer **all** questions from this section.

1. Choose the most correct answer among the given alternatives and write its letter below the item number in the space provided.

(i) Which of the following is expected to happen if blood supply to the brain is reduced?

A. Fainting

B. Nausea

C. Shivering

D. Shock

(ii) How does chewing food properly before swallowing enhance digestion?

A. Dissolves chemicals taken into the mouth

B. Kills harmful microorganisms present in the food

C. Helps digestive enzymes to penetrate the food

D. Breaks down small pieces of food into large ones

(iii) A food is moved along the oesophagus by the process known as

A. Chewing

B. Euglena

C. Swallowing

D. Peristalsis

(iv) Form II students noticed organisms growing on a decaying log during a nature walk. Their teacher explained that these organisms absorb nutrients instead of making their own food. Later, in the lab, they observed similar organisms. These organisms may be:

A. Mucor, mushroom, and yeast

B. Moss, mucor, and yeast

C. Euglena, mushroom, and mucor

D. Liverworts, mushroom, and mucor

(v) Which of the following actions can put an O-Level student at risk of harmful consequences?

A. Accepting favors and gifts from parents

B. Engaging in sexual relationships as an O-Level student

C. Keeping good friends and avoiding immoral friends

D. Shaking hands with HIV/AIDS victims

A. Human being

B. Maize

C. Bacterium

D. Virus

(vii) Which part of microscope should one use to regulate the amount of light passing from the mirror to the condenser?

A. Stage clip

B. Diaphragm

C. Hinge crew

D. Ocular tube

(viii) A parasitic relationship between two living organisms which results into death of one or both of them and it is usually short lived and rare in nature is called

(ix) A relationship between two organisms where one benefits at the expense of the other, the host

A. Amensalism

B. Mutualism

C. Commensalism

D. Parasitism

(x) People with blood group O have

A. Antigen B

B. Antigen A and B

C. Antigen A

D. No antigen

(xi) Which of the following does NOT contribute to the movement of water through the xylem vessel?

A. Capillarity

B. Transpiration pull

C. Root pressure

D. Guttation

Questions	i	ii	iii	iv	v	vi	vii	viii	ix	x
Answers										

2. Match each item in **List A** with the most correct response in **List B** and write it`s letter below the item number in the space provided.

LIST A	LIST B
(i) A disease characterized by fever and prolonged coughing with blood septum. (ii) A disease transmitted by a vector known as anopheles. (iii) A viral disease transmitted through sexual intercourse. (iv) Disease caused by lack of proper hygiene and the victim had a stool of rice - water coloration. (v) A disease transmitted through sexual intercourse and treated by antibiotics.	A. Cholera B. AIDS C. Typhoid D. Malaria E. Syphilis F. Influenza G. Schist soma H. Tuberculosis

List A	i	ii	iii	iv	v
List B					

SECTION B (70 MARKS)

Answer **all** questions from this section.

3. (a) How does a plant cell differ from an animal cell? give four points

(i) ……

……

(ii) ……

……

(iii) ……

……

(iv) ……

……..

(b) What will happen if the cell membrane is severely damaged?

……

……

4. (a) Two people have been severely injured in a car accident, leading to excessive bleeding, hence requiring blood transfusion. Suggest four precautions to be considered before carrying out this process

(i) ……
……
(ii) ……
……
(iii) ……
……
(iv) ……
……

(b) Why is blood transfusion important for these individuals? Give a reason

……
……

5. Form Two students at Seypalm Secondary School classified mosses and ferns into the same Division simply because they have chlorophyll for photosynthesis.

(a)Which classification system did they use?

……

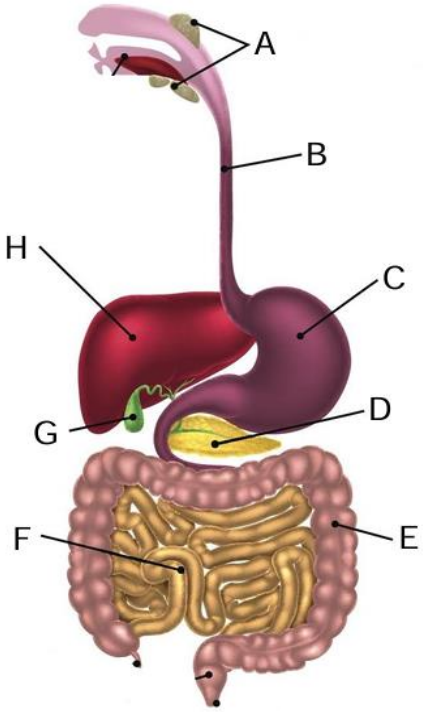

(b) Explain four demerits of the classification system used in (a) above

(i) ……
……..
(ii) ……
……
(iii)……
……
(iv)……
……

6. (a)Label all the parts shown in the diagram below (figure 1) from A-H

A. ……
B. ……
C. ……
D. ……
E. ……
F. ……
G. ……
H. ……

Figure 1

(b)Mention two functions of the watery fluid secreted by the structure labeled A

(i) ……

……..

(ii) ……

……

(c) Organ C is muscular J-shaped, located in the upper left side of the abdomen, just below the diaphragm. Its inner wall produces a digestive juice: mention any two composition of the juice and its function.

(i) ……

……..

(ii) ……

……

7. (a) How would somebody be able tell whether a phenomenon is food web or a food chain.

……

……..

(b) The diagram below (figure 2) represents the different trophic levels in the ecosystem. Study it and answer the questions that follow:

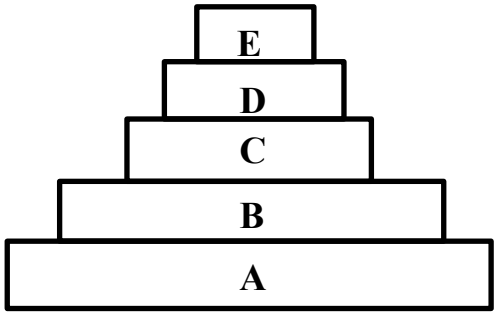

Figure 2

(i) Mention a trophic level represented by each letter in the diagram.

A ……..

B …….

C ……..

D ……..……

E …….

(ii) Why do the trophic levels form a pyramid shape?

……..

……

(iii) State the role of the organisms in the trophic level represented by the letter E in the diagram.……

8. (a) Identify the organs which are used for gaseous exchange in the following organisms:
   (i) Cow……
   (ii) Frog……
   (iii) Maize leaf……..
   (iv) Fish……

   (b) Plants cannot survive without carrying out the process of gaseous exchange. In three points, Justify this statement.
   (i) ……
   ……
   (ii) ……
   …….

9. Imagine you are part of a community health team working in a rural area where malaria is common. What five practical methods would you suggest or use to help prevent the spread of malaria among the residents, and why?

(i) ……

……

(ii) ……

……

(iii)……

……

(iv)……

……..

SECTION C (15 MARKS)

Answer this question

10. Suppose you are invited to take part in the debate with the motion which states that "Scientists should find a way to get rid of all bacteria". oppose the motion by giving six reasons.

……

……..……

……

……

……

……

……

……

……

……..……
