GEOGRAPHY

FORM II

MARKING GUIDE

I	II	III	IV	V	VI	VII	VIII	IX	X
C	C	A	B	B	C	D	C	A	D

10@1

LIST A	I	II	III	IV	V
LISTB	C	E	B	A	D

05@1

a) Igneous rock – 02

b) -i- Intrusive igneous rock
ii- Extrusive igneous rock 2 points @1=2

c) -i- They are hard
-ii- They are crystalline
-iii- They do not contains fossils 4 points @1=4
-iv- They can undergo metamorphism to form metamorphic rock
-v- They are formed due to cooling and solidification of molten materials

d) -i- They are source of minerals
-ii- They attract tourists
-iii- They lead to formation of fertile soil etc 2 points @1 = 2

10

a) -i- Creation theory by the creationism
-ii- Big bang theory by Edwin Hubble and Lemaitre George
-iii- Nebular hypothesis by Immanuel Kant
-iv- Inter-stellar dust hypothesis proposed by Otto Schmidt

4 points @1 = 4

b) Big bang theory — 02

c) Weaknesses of big bang theory
-i- The theory doesn't explain the origin of singularity
-ii- It doesn't explain the cause of explosion
-iii- If all of the galaxies appeared at the same time they could potentially be of the same age.

2 points @1 = 2

d) Significances of the knowledge about the origin of the earth
-i- To solve the misunderstanding on the origin of the planet earth.
-ii-

2 points @1 = 2

10

5. i- Simple fold / symetrical fold
ii- Assymetrical fold
iii- Overfold
iv- Overthrust fold

4 points @ 2½ = 10

6. Factors influencing the desert to adapt to the harsh environment in the desert
-i- They have shallow and wide spread roots for absorbing rainfall moisture
-ii- They have long roots system to absorb water from deep underground
-iii- They have few & needle-like leaves that reduce the rate of water loss through transpiration
-iv- They shade their leaves during dry season to preserve water
-v- They have few and sunken stomata that have situated at the lower part of leaves to reduce water loss through transpiration
5 points @ 2 = 10
-vi- They have thick and succulent stems which help them to store water for use during dry season
-vii- They have thick and waxy cover that keep the plant cooler and reduce the rate of evaporation

10

a) Uses of solar energy

-i They used for domestic purposes
-ii- Solar energy is the source of heat and light
-iii- Solar energy is the source of Vitamin D
-iv- It is the alternative source of energy
-v- It is important in rain formation
-vi- It is used for industrial purposes

3 points @ 2 = 6

b) -i- Both are used to determine distance
-ii- Both are used to identify routes for aviation and navigation
-iii- Both shows the location of places
-iv- Longitudes are used to determine days and dates
-v- Latitudes are used to determine climatic variation
-vi Longitudes are used to calculate time

4 points @ 1 = 4

10

8. Evidences that support the spherical shape of the earth

-i- Sunrise and sunset
-ii- Aerial photograph
-iii- Circumnavigation of the earth
-iv- Lunar eclipse
-v- The earth's curved horizon
-vi- Ship's visibility
-vii- Changing altitude of the sun
-viii- Surveying with poles

5 points @ 2 = 10

9. a) Continents and their sizes

i Asia - 44.6 mill. km^2
ii Africa - 30.3 mill km^2
iii- S. ~~America~~ America 24.7 mill km^2
iv N. America 17.8 mill km^2
v Australia 14. mill km^2
vi Europe 10.1 mill km^2
vii Antarctica 8.5 mill km^2

7 @ 1

b) - Lakes eg. Lake Victoria, Rukwa, Eyasi
- Sea eg. Red sea, yellow sea, Mediteranean
- Oceans eg Pacific, arctic, indian, Atlantic

3 points @ 1 = 3

18

Introduction

Relief features. 02

Main body

Importance of relief features.

-i- Source of rivers eg highland features
-ii- Encourage development of tourism eg mountains
-iii- They modify climate eg waterbodies and mountains
-iv- They lead to formation of lake and river eg mountains
-v- They are source of fertile soil
-vi- They facilitate transport of people and goods.

6 points @ 2 = 12

Conclusion

Any related! -01
