THE PRESIDENT'S OFFICE
REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT
LONGIDO DISTRICT

FORM THREE ANNUAL EXAMINATION
012 HISTORY
MARKING SCHEME NOVEMBER 2025

SECTION A (16 MARKS)

1. **10 Marks**

(i)	(ii)	(iii)	(iv)	(v)	(vi)	(vii)	(viii)	(ix)	(x)
B	D	A	B	B	B	B	C	B	B

2. **05 Marks**

(i)	(ii)	(iii)	(iv)	(v)	(vi)
A	B	C	D	E	G

SECTION B (54 MARKS)

3. (i) The three distinct periods of the Stone Age are
   - **Palaeolithic Period** (Old Stone Age).
   - **Mesolithic Period** (Middle Stone Age).
   - **Neolithic Period** (New Stone Age).

   (ii) The meaning of *Homo sapiens* is "wise human" or "wise man," derived from the Latin words *Homo* (human/man) and *sapiens* (wise). It refers to the species to which all modern humans belong, characterized by advanced cognition and a large, rounded braincase.

   (iii) Three factors that led to the development of agriculture during the Late Stone Age were:
   - **Climate Change:** The end of the last Ice Age led to a warmer, wetter climate. This created more favorable conditions for wild plants, particularly cereal grains like wheat and barley, to flourish, increasing their availability to early human populations.
   - **Population Growth:** Increased population density in certain areas, such as the Fertile Crescent, put a greater demand on existing food sources. This pressure made the more intensive, but also more reliable, method of farming a necessary adaptation.
   - **Availability of Plants and Animals:** The concentration of certain wild plants and animals in specific areas, especially around oases as the climate changed, allowed people to become more familiar with their life cycles. This intimacy with wild food sources was a precursor to their eventual domestication. **(9 marks)**

4. Chronology: **(9Marks)**

i.	ii.	iii.	iv.	v.	vi.
3	2	1	4	5	6

5. **2(4) = 8 marks, Drawing = 1 marks**

(09 Marks)

6. (a)

Direct rule is a system of colonial administration where the colonial power removes traditional local leaders and institutes its own officials to govern the territory directly. All laws and policies are implemented by colonial authorities, and the indigenous population has no direct representation or legal rights within the colonial government. This approach was often more expensive and more brutal, as seen with German colonial rule in Tanganyika.

Indirect rule, conversely, is a system where the colonial power rules through existing local power structures, such as traditional chiefs, sultans, or emirs, who act as intermediaries for the colonial administration. While British advisors oversee these local rulers, the indigenous leaders are given the responsibility for day-to-day governance, including tax collection and maintaining order. This method was pioneered by Frederick Lugard in Nigeria. **(4 marks)**

(b) Four reasons why the British preferred to use the policy of indirect rule were:

- **Cost-effectiveness**: Administering vast colonial territories with a small number of European officials was expensive and inefficient. By using the existing local rulers and institutions, the British significantly reduced the administrative costs, including salaries and infrastructure.
- **Limited manpower**: The British had insufficient personnel to govern their extensive African colonies directly. Many British citizens were also unwilling to work in Africa due to fears of tropical diseases and other hardships, making reliance on local chiefs a practical necessity.
- **Suitability of existing structures**: In some areas, such as the Sokoto Caliphate in Northern Nigeria, there was a pre-existing hierarchical and organized system of administration. It was simpler for the British to co-opt and use this structure rather than building a new one from scratch.

- **Minimizing resistance**: By incorporating traditional African rulers into the colonial administration, the British aimed to present their rule as less disruptive and intrusive. This co-opting of local elites helped to pacify the population and reduce the likelihood of widespread and organized resistance, as any complaints would be directed toward the local intermediaries rather than the colonial government. **(5 marks)**

7. (a) The reasons for the decline of Portuguese rule in East Africa included several internal and external factors. **(5 marks)**

- Constant resistance from local inhabitants and Arab traders: The coastal people never fully accepted Portuguese rule, which they saw as brutal and exploitative. Supported by Oman, coastal towns frequently rebelled. The Omani Arabs, in particular, fought a persistent war against the Portuguese that culminated in the siege and capture of Fort Jesus in Mombasa in 1698.

- Dutch and British rivalry: Other European powers, primarily the Dutch and British, started challenging Portuguese trade interests in the Indian Ocean from the 17th century. This competition eroded Portugal's trade monopoly, reducing its power and influence in the region.

- Weakness of Portugal as a colonial power: Portugal was a small, poor country with limited resources and manpower, making it difficult to effectively administer and defend its vast overseas territories. The distance from Portugal also made it difficult to provide timely military and financial reinforcements.

- Tropical diseases: Portuguese officials and soldiers were highly vulnerable to tropical diseases like malaria, which significantly reduced their manpower and capacity to govern effectively.

- Inefficient and corrupt administration: The Portuguese officials were often harsh, corrupt, and inefficient, leading to resentment and increasing the likelihood of resistance from the local population.

(b) Four methods used by Europeans to occupy and administer Tanganyika were: **(4 marks)**

- Military conquest: For regions that resisted, Europeans used military force to establish and maintain their control. For instance, the Germans used their military to crush resistance from the Hehe people, led by Chief Mkwawa, between 1891 and 1894.

- Use of company rule: Initially, trading companies were used to occupy and finance the administration of territories. The German East Africa Company, led by Karl Peters, signed treaties with local chiefs and established administrative stations to control the Kilimanjaro region.

- Direct rule: The German colonial administration in Tanganyika employed a system of direct rule, where they replaced traditional rulers with German officials or appointed local personnel (like Akidas and Jumbes) to oversee districts. This system was used to weaken traditional power structures and ensure complete German control.

- Indirect rule (British mandate): After World War I, Tanganyika became a League of Nations mandate territory under British control. The British adopted a policy of indirect rule, governing through existing African authorities. This was implemented through legislation like the Native Authority Ordinance of 1926, which empowered traditional leaders to oversee local administration under British supervision.

8. (a) Four characteristics of the colonial trade in Africa are: **(4 marks)**

- **Export-Import Oriented**: The colonial economy specialized in producing raw materials (like cash crops and minerals) for export to European industries, while importing finished manufactured goods from Europe.
- **Exploitative Nature**: The trade relations were inherently exploitative, with colonial powers determining prices that benefited their industries while giving African producers a minimal return.
- **Destruction of Local Industries**: To create a market for European manufactured goods, colonial trade actively suppressed and destroyed pre-existing African industries, preventing local competition.
- **Forced Labor**: The production of goods for colonial trade often relied on coercive and forced labor, with Africans compelled to work on colonial projects or plantations to earn money for taxes.
- **Monoculture Specialization**: Many colonies were forced to specialize in the production of a single major commodity, which made their economies extremely vulnerable to fluctuations in global market prices.
- **Monetary System**: The introduction of a cash economy by colonial powers forced Africans into the trade system, as they needed cash to pay newly introduced taxes and purchase imported goods.

(b) The construction of the Uganda railway line significantly affected the economy of Kenya in several ways: **(5 marks)**

- **Facilitated Settlement and Agriculture**: The railway enabled European settlers to move into the fertile "White Highlands" of Kenya, allowing them to establish large-scale farms for export crops like coffee and tea. Without the railway, this type of intensive commercial agriculture would not have been viable.
- **Lowered Transport Costs**: The railway drastically reduced the time and cost of moving goods between the coast and the interior. Before the railway, relying on porters was expensive and slow, but the railway made it possible to transport large volumes of equipment and agricultural products affordably.
- **Stimulated Urban Growth**: The railway's route determined the location and growth of new towns and urban centers, most notably Nairobi, which started as a railway depot. The line turned these areas into hubs for trade and administration, fundamentally reshaping Kenya's economic geography.
- **Opened Up the Interior**: The railway allowed for the deeper penetration of colonial rule and economic activities into Kenya's interior. It enabled the British to consolidate control and extract resources from regions that were previously difficult to access.
- **Exploitation of Labor**: The construction of the railway required immense labor, which was often exploited. Indian and African laborers were used in large numbers, often in harsh conditions, contributing to the development of a low-wage, colonial labor market.
- **Increased Trade Volume**: The railway's ability to carry bulk goods led to a massive increase in the volume of trade passing through the port of Mombasa. This growth was vital for the colonial economy, although it primarily benefited the British and European settlers.

SECTION C (30 MARKS)
Answer two questions in this section

9. Evidence of discrimination in colonial health systems

Racial Segregation of Facilities: Colonial health systems were fundamentally segregated, with separate and superior facilities for Europeans. In Ghana, for example, medical records explicitly distinguished between "European" and "African" hospitals, with the former having better resources and care.

Disparities in Funding and Quality of Care: European hospitals and urban clinics received far more funding, better equipment, and qualified staff than the grossly underfunded and understaffed facilities serving the African population. The quality of care was deliberately unequal.

Focus on Labor and Economic Productivity: Healthcare for Africans was primarily utilitarian. It focused on treating infectious diseases that could affect the workforce, thereby ensuring the health of the labor force and maximizing capitalist profits. Conditions that did not threaten European settlers or the workforce received minimal attention.

Control of Movement and Labor: Health policies were used as a tool of social control. Health inspections and the treatment of diseases like sleeping sickness were used to control the mobility of Africans and ensure a constant supply of labor for colonial enterprises.

Use of African Bodies for Medical Experimentation: There are documented cases where African bodies were used for unethical medical experiments without consent or proper care. In other contexts, this was based on racist beliefs that Black people felt less pain, as seen in some 19th-century medical experimentation.

Reinforcement of Racial Stereotypes: Colonial medical reports and practices often reinforced racist ideologies by portraying African intermediaries as untrustworthy and prone to "fetishism" and "charlatanism," despite relying on them for rural healthcare.

Introduction: Any relevant carries **01½ marks**
Main body: Any relevant point explained **02½ Marks@, 5 points = 12½ marks**
Conclusion: Any relevant conclusion **01 mark.**

10. Effects of Omani rule in Zanzibar and East Africa from the 1840s

Introduction: The relocation of the Omani Sultan's capital to Zanzibar around 1840 marked a turning point, ushering in significant economic, political, and social changes on the East African coast.

- **Expansion of plantation economy:** Sultan Sayyid Said introduced the commercial cultivation of cloves, for which Zanzibar's climate and soil were highly suitable. This boosted Zanzibar's wealth and made it a global supplier of cloves, though it also created a heavy reliance on a single crop.

- **Intensification of the slave trade:** The expansion of plantations, especially for cloves, fueled a massive increase in the demand for slave labor. Zanzibar became a central hub for the East African slave trade, with slaves being brought from the interior to work on plantations and be re-exported.

- **Growth of international trade:** Zanzibar, with its strategic location and excellent harbor, became a major hub for international trade. European and American powers established

consulates, and merchants from India were encouraged to settle, facilitating commerce in goods like ivory, cloth, and spices. This integrated Zanzibar further into the global economy.

- **Shift in political power and administrative structure:** The relocation of the Omani capital solidified the Sultan's political control over Zanzibar and parts of the coast, reducing the autonomy previously enjoyed by the individual Swahili city-states. This led to a more centralized administration under the Omani Sultan.

- **Cultural and social influence:** The Omani presence strengthened the spread of Islam and Arabic culture along the coast. Intermarriage between Omani Arabs and local Swahili populations was common, leading to a blend of cultures. However, it also entrenched a ruling Arab elite, creating social stratification.

- **Increased European involvement:** The economic importance of Zanzibar attracted increased interest from European powers, particularly Britain, who sought to control trade routes and later pressured the Sultan to abolish the slave trade.

  Conclusion: Any relevant conclusion **01 mark.**

11. Five major changes in human life associated with discovery of agriculture were:
    (i) It led to the population increasing due to increased food production.
    (ii) It contributed to the rise of labour specialization; whereby community members started to engage in different activities accordingly, some engaged in agriculture, others in iron tools fishing, basketry and pottery.
    (iii) It led to the development of permanent settlement to human-being.
    (iv) It influenced the development of trading activities.
    (v) It led to the development of a socio-political system, for solving various challenges faced by human beings by the time through having leadership in their communities.
    (vi) Development of the Calendar system.
    (vii) Development of the religious system.
    And any other relevant point
