GEOGRAPHY F. III TERMINAL 2021

MARKING SCHEME.

1

I	II	III.	IV	V	VI	VII	VIII	IX	X.
B	D	A	A	D.	D	D	A	C	B

1@=10

2.

I	II	III	IV	V
G	E	C	D	A

1@=05

SECTION B 55 MARKS

3 Intro.

Soil formation refers to the process in which Soil is formed.

Main body.

(i)– Parent rock.
(ii)– Climate
(iii)– Living organism
(iv)– Relief (Topography)
(v)– Time.

Concl.

Any related Conclusion is awarded.

4. a) Igneous rock is a rock formed through Cooling and Solidfication of Magma from within the Earth's Surface. Eg. granite.

b) Characteristic of igneous rocks

(i) They are hard and non stratified.
(ii) They Consist of Crystals
(iii) They do not Contain fossils
(iv) They are formed as a result of Cooling and Solidfication of ~~Eddh~~ Either Magma or Lava.

4 c) Igneous rock is referred to as the Mother rock due to the following reason.

i) Is a Source of formation of other rocks.

ii) Mineral Composition, texture, Structure and depth of the Soil formation depends on the nature of the Igneous rock.

iii) The large Part of the Earth's Surface / Crust results from Igneous rocks.

iv) Temperature could change Igneous rock to metamorphic rock.

5 Intro:

The shape of the Earth is an oblate spheroid.
- It is spherical in shape.

EVIDENCES.

i) Sunrise and Sunset

ii) Circumnavigation of the Earth / Traveling through or Even within different time zone.

iii) Aerial photograph of the Earth / International Space Station photos.

iv) Ship's visibility

v) Lunar Eclips

vi) The Earth's Curved horizon.

vii) Measure shadows across the Country etc

6 a) Chemical weathering involves the decomposition of some or all mineral constituents in a rock resulting in the collapse of the rock itself. While:

Biological weathering is the disintegration of rocks due to the action of living organism ie. plants & animals

b) Processes of Chemical weathering

(i) Carbonation is a process whereby Carbonic acid reacts with Carbonates Contained in other substances to form a new substance.

$$CaCO_3 + H_2O + CO \longrightarrow Ca(HCO_3)_2$$

(ii) Oxidation: oxygen Combines with any substance to form a new substance.

$$4Fe + 3O_2 \longrightarrow 2Fe_2O_3$$

(iii) Solution: Rain water attacks certain rocks such as rock salt which can be Easily be removed in solution that Percolates in the soil

(iv) Hydrolysis is a process whereby hydrogen ions from water Combine with Mineral ions from the rocks to form new Chemical Compounds.

(v) Hydration: Some minerals absorb water and swell hence become loose and break Easily.

7. a)(i) Delta is an area of low, flat land shaped like a triangle, where a river splits and spreads out into several branches before entering the sea.

(ii) A river delta is a landform created by deposition of sediments that is carried by a river as the flow leaves its mouth and enters slower-moving or stagnant water.

or

It occurs where a river enters an ocean, sea, estuary, lakes, reservoir or another river that cannot carry away the supplied sediments.

b) Conditions necessary for the formation of ~~delta~~ River delta.

(i) Large sediments are carried and deposited at the river mouth.

(ii) Low velocity of the river at the mouth.

iii) High rate of deposition than the rate of removal of silt at the river mouth

iv) A shallow shore around the river mouth.

SECTION C (GUIDANCE)

8. Introduction - 3 marks

A honey Pot is a location attracting things of tourists who, due to their numbers, place pressure on the environment and local people.

Main body

- Mountains
- Water bodies
- National Parks
- Forest
- Crater. 2@ ⇒ 10 mark

Conclusion: related to the idea from the main body. 2 marks

Total 15 marks.

9. Intr..

Transport is the ~~not~~ movement of people, goods and services from one place to another. while Communication is the transfer of ideas and information from one person to another

Main body: Significance.

- Provides Employment to People
- Provide income
- Improves living standards of the people
- Helps in generation of govt revenue
- Help in transfer of technology
- Facilitates growth of trade
- Facilitates availabilities of goods and services etc

10. Intro:

Navigation System is the process whereby People and goods are transported from one place to another through boats, Canals, and other marine vessels.

Mainbody.

- Narrowness of the river
- Presence of dangerous animals
- Fluctuation of volumes of water
- Presence of meanders
- Presence of waterfalls and water rapids etc

Con: any relevant Conclusion.
