THE UNITED REPUBLIC OF TANZANIA
THE PRESIDENT'S OFFICE
REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT
LONGIDO DISTRICT
ANNUAL JOINT EXAMINATION

FORM THREE
013 GEOGRAPHY
MARKING SCHEME NOVEMBER 2024

SECTION A (16 Marks)

1. (16 marks) question 1 carries 10 marks and question 2 carries 6 marks

Question	(i)	(ii)	(iii)	(iv)	(v)	(vi)	(vii)	(viii)	(ix)	(x)
Answer	B	D	D	E	B	B	E	D	C	E

2.

Question	**(i)**	**(ii)**	**(iii)**	**(iv)**	**(v)**	**(vi)**
Answer	F	E	D	G	I	C

SECTION B (54 marks)

Each question carries 9 marks

3. (a) Elements of weather

i) Sunshine
ii) Temperature
iii) Humidity
iv) Cloud cover
v) Precipitation
vi) Wind
vii) Atmospheric pressure

(b)Climate of the world

i. Equatorial climate.
ii. Tropical/savannah climate.
iii. Polar climate.
iv. Hot Desert climate (Tropical desert)
v. Mediterranean climate

(c)Difference between weather and climate

Weather	Climate
• Weather it is the atmospheric condition of a place that recorded at a short period of time • Weather covers a small area. E.g one region can be sunny while the other area is rainy • Weather takes a short time to change. E.g the area might be rainy at the morning and dry at the noon and windy in night	• Climate is the average weather condition of a place that recorded over a long period of time • Climate it covers a large area E.g the climatic data recorded in tropical region. • Climate takes a long time to change. This means that the climate will continue to be same for the long time and change gradually for several years.

4. (a) The genetic process observed by Mr. Seypalm was **Vulcanicity**

(b) Features produced by Vulcanicity

(i) Intrusive volcanic features examples Dyke, sill, Batholith, Laccolith

(ii) Extrusive volcanic features examples Volcano, Crater, Volcanic plug

(c)Environmental impact of Vulcanicity

(i) Large volcanic eruptions can cause deaths as well as destruction of properties. Lava and mudflows caused by volcanic eruption kill people and destroy properties as it erupts and flows rapidly down the volcano sides.

(ii) The lava flow can also destroy agricultural land since the solidified lava hardens and makes it difficult for farmers to cultivate the land.

(iii)Volcanic eruptions may release poisonous gases such as sulphur dioxide and carbon dioxide which may have adverse impacts to human beings as well as the atmosphere.

(iv)Formation of new landforms

(v) It may lead to global warming

5. Concentric zone of the Earth

(i) The core

The core is the inner most part of the earth. It is also called barysphere. It consists of nickel and iron. The core is under great pressure and heat with average density of about 10.5 gm/cc. The core is divided into two parts, namely outer and inner cores. It is demarcated from the mantle by a layer called ***Gutenberg discontinuity.***

(ii) The mantle

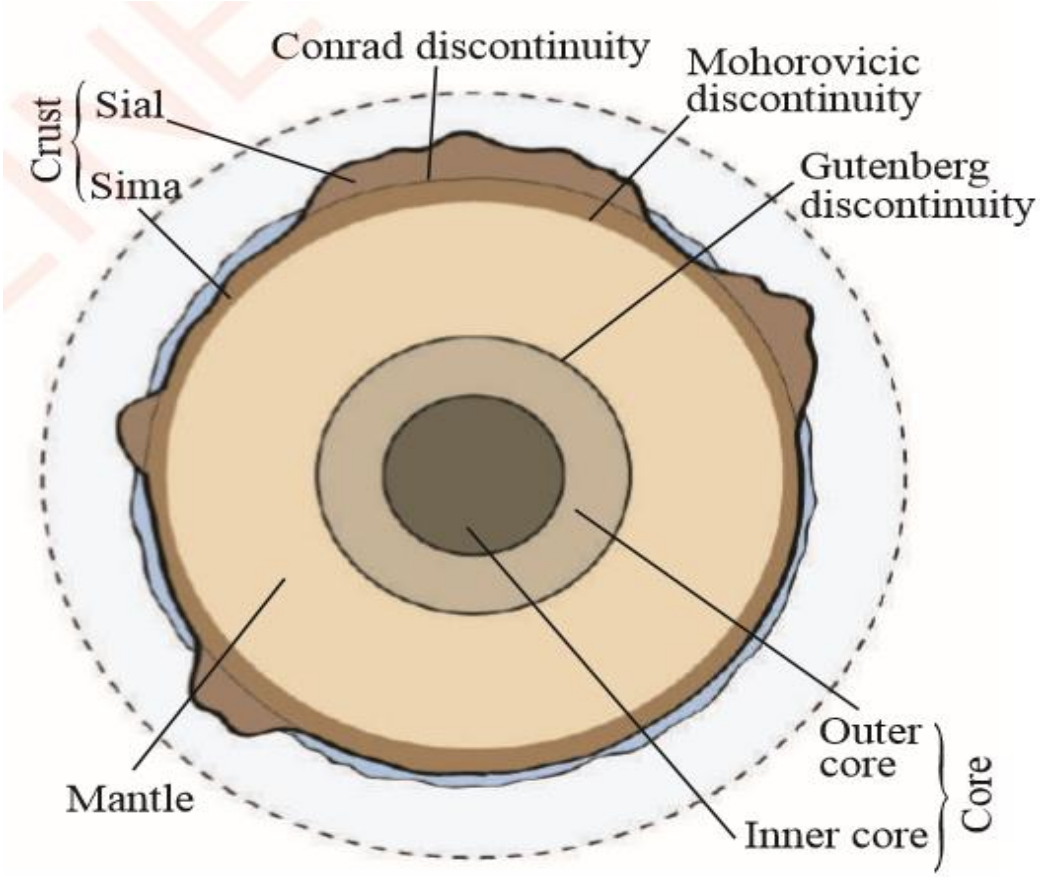

The mantle is also referred to as mesosphere. It lies between the core and the crust. It is made of very dense igneous rocks of iron, silicon, oxygen, aluminum and magnesium. It extends downwards to about 2 900 kilometres. It consists of rocks with a density of about 3.0 gm/cc to 3.4 gm/cc.

(iii) The crust

The crust is the outermost and the thinnest zone of all zones of the internal structure of the earth. The crust has a thickness of about 8 kilometres to 50 kilometres and an average density of 2.7 gm/cc. It consists of two sub-layers laying over one another, namely the SIAL and SIMA. SIAL is the continental part of the crust which is composed of granite rocks. The rocks are composed of silica and aluminium (SIAL). The SIMA is the layer beneath the SIAL. It is made up of

basaltic rocks rich in silica and magnesium. This layer makes up the ocean floor. The SIMA and SIAL are separated by a layer known as Conrad discontinuity.

DIAGRAM OF CONCENTRIC ZONE OF EARTH

6. (a) The name of the movement is **Tourism**

Tourism is a temporary movement of people to places of interest for leisure, pleasure, studies and trade or business, outside their normal working stations or home.

(b) Types of tourism

(i) Domestic tourism involves travel within the same country for leisure, pleasure or study. For example, when people move from Mbeya to Mikumi National Park to view wild animals, this kind of tourism is called domestic tourism.

(ii) International tourism involves movement from one country to another for leisure, business, education, etc. For example, many people travel from Europe and America to Tanzania to climb Mount Kilimanjaro, or to view other attractive things.

(C)Importance of tourism

(i) Source of foreign exchange especially from foreign tourists.

(ii) Source of employment, it provide employment opportunity to the people such as tour guiders, tour drivers, etc

(iii)Improvement of infrastructure, that facilitate movements of people(tourists) from one place to another.

(iv)Promotes international relations and promotes international respectability e.g Switzerland

(v) Source of government revenue hence economic development as the tourist pays entry fees in national parks.

(vi)Conservation of wildlife and environment, protection of historical sites and cultural preservation.

7. (i) Actual distance is **100km**

(ii) Economic activities

(i)Agriculture activities due to the presence of plantation

(iii) Tourism activities due to the presence of crater and mountain

(iv) Fishing activities due to the presence of water bodies

(iii)Area is **8km^2**

(iv) Statement scale is 1cm to 0.5 km

8. (a) The geographical phenomena is **Mass wasting**

(b) Types of mass wasting

(i) Slow Mass Wasting

Is a slow but steady movement of rock debris and soil down a slope. It can be slow that might be quite noticeable. Slow mass wasting involves pressure like soil creep, talus creep, solifluction (slugging), rock creep.

(ii) Rapid Mass Wasting

Rapid Mass Wasting Is the movement which includes sudden and fast movement of materials. The rapid movement involves earth flow, mud flow, land slides. e.t.c

(c) Factors influencing occurrence of mass wasting

-***Nature of the materials and extent of saturation.*** Where the materials are loose the movement is fast unlike the place where materials are stable. Also movement takes place easily when materials are saturated.

-***The gradient (The angle of slope).*** Where the slope is steep the movement is fast where the slope is gentle there is slow movement and on flat surface mass movement may not take place except on subsidence that may be caused by faulting.

-***Climate ;*** in a high rainfall mass movement takes a flow nature water act as a lubricant reducing friction between the particles leading to rapid flow movement after saturated an alternate freezing and thawing also encourages mass movement.

-***Vegetation.*** Mass movement are fast in areas which aren‘t covered with vegetation unlike the areas which having vegetation cover. The presence of vegetation on the slope leads to stabilization of soil and weathered rocks material prevents mass movement to take place.

-***Human being.*** Human being accelerates mass movements through different activities like mining, cultivation and grazing. During cultivation the rock particles are loosened and hence become susceptible to mass movement due to the force of gravity.

(d) Causes of mass wasting

(i) Human being. Human being accelerates mass movements through different activities like mining, cultivation and grazing. During cultivation the rock particles are loosened and hence become susceptible to mass movement due to the force of gravity.

(ii)Earthquake

(iii) Volcanic eruption.

SECTION C (30 marks)

9. Introduction: Any relevant introduction. 2 marks
Main body (six (6) points) 2 marks @ = 12 marks

The following are efforts made to develop air transport in Tanzania:

(i) Construction of new airports
Like Songwe airports, Dodoma airports and Chato airports

(ii) Buying of new aircrafts
Like bombardier and Dreamliner

(iii) Expansion of old airports
Expansion of Mwl. J.K. Nyerere terminal III

(iv) Increasing route
Example route from Tanzania to India, Tanzania to South Africa.

(v) Improvement of roads
There is good construction of roads that reach to airports

(vi) Increasing number of experts
Currently there are increased number of local pilots.

Conclusion: Any relevant. 1 mark
Total = 15 marks

10. Introduction: meaning solar energy. (2 marks)

Main body (six (6) points) – 2 marks @ = 12 marks

The following are the reasons which diminishing the solar energy production in Tanzania

i) High cost of equipment
ii) Poor technology
iii) Lack of skilled labor
iv) Poor government support
v) Presence of varied energy sources like firewood and charcoal

Solutions

(i) Emphasizing the use of solar energy as the friendly to the environment
(ii) Research should be carried out
(iii) Government should invest adequate capital in solar energy production

Conclusion: Any relevant. 1 mark
Total = 15 marks

11. Definition of earth (1.5 marks @)
-the following are the evidences form three will prove to form one that the earth is spherical
(i) Circumnavigation of the earth
(ii) Sunrise and sunset
(iii) Ship visibility
(iv) Eclipse of the moon (6 points each 2 marks)
(v) The Earth's horizon
(vi) Photographs taken by satellite
(Conclusion 1,5 marks @)
