THE PRESIDENT'S OFFICE
REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT
LONGIDO DISTRICT

FORM THREE ANNUAL EXAMINATION
013 GEAORAPHY

Time: 3 Hours **November 2025**

Instructions

1. This paper consists of sections **A**, **B** and **C** with total **eleven** questions.
2. Answer all questions in section A and B and only **two** questions from section C.
3. Section A carries sixteen marks, section B fifty-four Marks and section C caries thirty marks.
4. Map extract of KIGOMA **sheet 92/3** is provided
5. All drawings must be in a pencil
6. Cellular phones and any unauthorized material are not allowed in the examination room
7. Write your examination number on every page of your answer booklet (s)

SECTION A (16 MARKS)
Answer **all** questions from this section

1. For each of the following items **(i) – (x),** choose the correct answer from the given alternatives and write its letter besides the item number in the answer booklet(s) provided.
   (i) The energy of a river enables it to effect erosion and to transport its load. When rivers energy decreases some of its load is deposited. Therefore, the energy of the river does not decrease when
   A. The gradient of the bed decreases
   B. Its volumes decrease
   C. It meanders
   D. It is joined by another river
   E. Its channels get wider

   (ii) Mr. Seypalm saw strips of flatlands called terraces, which sometimes occur on either side of a river's valley. If the terraces are paired, they indicate that
   A. The level of the sea has risen
   B. The drainage is superimposed
   C. The river is meandering
   D. Rejuvenation has taken place
   E. River capture has taken place

   (iii)The rivers entering a limestone region often disappear down a vertical hole in the limestone surface which may lead to the rise of
   A. Underground rivers
   B. Formation of polje

C. Formation of gorge
D. Limestone land scape
E. Chalk landscape

(iv) Which of the following features never occur underground in a limestone region?
A. Stalagmite
B. Carven
C. Uvala
D. Stalactite
E. lake

(v) Geography subject teacher prepared a lesson about soil concepts on the vertical section showing the sequence of horizons. What does the concept mean?
A. Soil texture C. Soil horizon E. Soil water
B. Soil profile D. Soil structure

(vi) Pollution in the environment affects living things including human beings; pollution causes loss of human hearing ability, mental illness even heart failure. What kind of pollution leads to such impacts?
A. Water pollution C. Air pollution E. Soil erosion
B. Land pollution D. Noise pollution

(vii) Geologist uses the chart for dating the history of the earth including its crustal rocks. As a form four student help your fellow form three students to identify such kind of the chart.
A. Carbon 14 C. Geological time scale E. Ritcher scale
B. Periodic table D. Measurement chart

(viii) If temperature of Mpanda which is a 1500m above the sea level is 20^0C, what will be the temperature of Tumbatu Island which found at the mean sea level?
A. 11^0C C. 19.5^0C E. 9.0^0C
B. 29^0C D. 20.5^0C

(ix) The villages of Kidatu decided to remove silt and mud from river Kilombero, in order to increase its depth and volume. What is the name of the geographical process the villagers used?
A. Land reclamation C. Drainage E. dredging
B. Rehabilitation of the river D. Flashing

(x) Long river profile is characterized by three different functions and each with its intensity varying according to the nature of the slope and river stages, hence leading to the formation of different features respectively. Which of the following is not a feature produced in the old stage of the river?
A. Delta C. Levees E. Ox-bow Lake
B. Meanders D. Rapids

2. Match the concept in **List "A"** with the response in **List "B"** by writing the letter of the correct response beside the item number in the answer booklet (s) provided

List A	List B
(i) This is a very large mass of magma which accumulates in the crust.	A. Phacolith
(ii) Sheet of magma lies along a bedding plane	B. Batholith
(iii) The mass of magma cut across bedding plane.	C. Weathering
(iv) A lens shaped body of igneous rock that forms by intruding into and following the curves of folded sedimentary rocks	D. Lithification E. Dyke
(v) A mushroom or dome shaped body of intrusive igneous rock formed when magma pushes up through layers of sedimentary rocks	F. Lopolith G. sill
(vi) Natural process in which rocks tend to change from one type to another.	H. Metamorphism I. Laccolith

SECTION B (54 MARKS)

Answer **all** question from this section.

3. Carefully study the map extract of map sheet no 92/3 and answer the following questions:
   (a) State latitude and longitudes of the mapped area
   (b) Measure the distance of the road from grid reference 020580 to 910606 in kilometers
   (c) Calculate the area of the whole map in km^2
   (d) What are the three economic activities conducted in the mapped area

4. The following fluctuation of water volume in millimeters was noted in Lakes Victoria, Tanganyika and Nyasa from 2014 to 2016 as shown below:

YEARS	RUVU	RUAHA	KILOMBERO
2014	60	35	80
2015	80	70	50
2016	90	60	95

   (a) Present the data by a percentage compound bar graph.
   (b) With examples describe two reasons for the fluctuation of water volume in the river.
   (c) Provide two advantages of the method used to present the data.

5. In one of the research stages, the researchers tend to guess the expected results which can be correct or incorrect. With regards to this description, how would you help your friends who failed to respond the following questions:

   (a) Give the name of a research stage described above.
   (b) Give three significances of a stage named in (a) above.
   (c) Explain three qualities of a stage named in (a) above.
   (d) Identify two problems a researcher may face in dealing with the stage named above.

6. The form three survey team at Kakis secondary school were told by their geography teacher to conduct chain survey around their sports ground so as to make boundaries of their sports ground. In accomplishing their survey, the team realized that they had collected data with discrepancies due to the improper arrangement of the poles.
   (a) What is the type of discrepancy the surveying team encountered?

(b) What are the four things the survey team was supposed to consider that they would have avoided such discrepancy?
(c) How a surveyor can ensure good booking method during surveying process? Give any four points.

7. On 02nd September, 2025, a magnitude 7.5 earthquake occurred in northern parts of Afghanistan. It was among the most devastating earthquake to occur in the world. As a geography student:
(a) Analyze three factors that lead to the occurrence of earthquake.
(b) Name the scale used to determine the magnitude of earthquake.
(c) With example, mention two belts in Tanzania where earthquakes can occur.
(d) Suggest three safety ways of minimizing the effects of earthquake.

8. Carefully study the following photograph and then answer the questions that follow:

(a) Identify the type of photograph by giving two reasons.
(b) With evidences, identify any four possible economic activities that might be conducted on the area.
(c) By giving one reason, state the type of settlement pattern
(d) Describe two natural features found on the area.

SECTION C (30 MARKS)

Answer **two** questions from this section

9. Tanzania is endowed with various natural resources including minerals which are extracted in different mines. The extraction process seems to be unfriendly to the environment but that has not stopped people and government from mining activities. Why are the mining activities encouraged regardless of the side effects on the environment?

10. Explain how distance to water source from household affects the girl-child.

11. "Agriculture is a backbone economy of our country". Discuss this statement by giving six points.
