THE PRIME MINISTER'S OFFICE
REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT
LONGIDO DISTRICT MID TERM JOINT EXAMINATION

FORM THREE
013 GEOGRAPHY
MARKING SCHEME AUGUST 2026

SECTION A (16 MARKS)

1. **(10 marks @ 1 mark)**

(i)	(ii)	(iii)	(iv)	(v)	(vi)	(vii)	(viii)	(ix)	(x)
D	A	C	B	B	B	B	C	D	B

2. **(6 marks @ 1 mark)**

(i)	(ii)	(iii)	(iv)	(v)	(vi)
F	B	C	D	E	A

SECTION B (54 MARKS)

3. **(a) Statement scale (2 marks)**

Given 1:100,000 → 1cm on the map represents 100,000cm on the ground.
100,000cm = 1000m = 1km
Therefore, 1cm on the map represents 1km on the ground. (2 marks)

(b) Ground distance between P and Q (3 marks)

Northing difference = 418 − 368 = 50 (i.e. 0.50 units on the map) (1 mark)
Map distance = 0.5cm; Scale 1:50,000 → 1cm represents 50,000cm = 0.5km (1 mark)
Ground distance = 0.5 × 0.5km = 0.25km OR (depending on grid interpretation) 0.5km. Accept correctly worked answer showing formula: Ground distance = Map distance × Scale denominator. (1 mark for correct method/answer)

(c) Area of forest using square method (3 marks)

Area = Complete squares + (Incomplete squares ÷ 2) (1 mark)
Area = 40 + (18 ÷ 2) = 40 + 9 = 49 (1 mark)
Area of the forest = 49 km² (1 mark)

(d) Contour line (1 mark)

A contour line is an imaginary line on a map joining points of the same height/altitude above sea level. (0.5 mark)
Closely spaced contour lines indicate steep slopes/land, while widely spaced contours indicate a gentle slope. (0.5 mark)

4. (a) **Limitations of chain survey (Any 3 points @1mark = 3 marks)**

(i) Not suitable for large/extensive areas. (ii) Not suitable for areas with many obstacles (rivers, forests, buildings). (iii) It is time consuming for large areas. (iv) It cannot be used to survey areas

with hills/undulating land accurately. (v) It requires many ranging rods/arrows which can easily get lost.

(b) **Uses of instruments (6 marks @2mark)**

(i) Ranging rod – used to mark and sight straight lines on the ground during survey.
(ii) Offset – used to locate/fix the position of objects that are not on the survey line, in relation to the chain line.
(iii) Optical square – used to set out/measure right angles (90°) at a survey station.

5. (a) **Latitude and Longitude (2 marks)**

Latitude is an imaginary line that runs from East to West around the earth, used to measure distance North or South of the Equator. (1 mark)
Longitude is an imaginary line that runs from North to South (pole to pole), used to measure distance East or West of the Greenwich (Prime) Meridian. (1 mark)

(b) **Local time in London (3 marks)**

Time difference = 39° ÷ 15° = 2 hours 36 minutes (1 mark)
Since Dar es Salaam is East of Greenwich, its time is ahead of London's time. (1 mark)
Local time in London = 3:00 PM − 2:36 = 12:24 PM (1 mark)

(c) **Two effects of rotation of the earth (2 marks @1mark)**

(i) Causes day and night. (ii) Causes deflection of winds and ocean currents (Coriolis Effect).

(iii) Causes difference in local time between places on different longitudes. (Any two)

(d) **Two effect of revolution of the earth (2 mark)**

Causes change of seasons / causes variation in length of day and night through the year. (Any Two)

6. (a) **Climate (1 mark)**

Climate is the average condition of the atmosphere/weather of a place observed over a long period of time (30 years or more).

(b) **Factors influencing climate (Any 3 @1mark = 3 marks)**

(i) Altitude (ii) Latitude (iii) Distance from the sea (continentality)

(iv) Ocean currents (v) Relief/mountain barriers (vi) Prevailing winds

(c) Weather instruments (3 marks @1mark)

(i) Thermometer – measures temperature. (ii) Rain gauge – measures amount of rainfall.

(iii) Barometer – measures atmospheric pressure. (iv) Anemometer – measures wind speed.

(v) Hygrometer – measures humidity. (Any three with correct measurement)

(d) Difference between weather and climate (2 mark)

Weather is the state/condition of the atmosphere of a place at a particular/short period of time, while climate is the average weather condition of a place over a long period of time.

7. (a) Soil is the upper layer of the Earth's surface containing mineral particles, organic matter, air and water, which supports plant growth. **(1 mark)**

(b)
Loamy soil / loam. **(1 mark**)
(c) Any three: **(3 marks)**
(i). Has large/coarse particles.
(ii). Has large air spaces.
(iii). Allows water to drain quickly.
(iv). Has low water-holding capacity.
(v). Is generally easy to cultivate.
(vi). Usually has relatively low nutrient-holding capacity compared with clay/loam.

(d) Any two explained: **(2 marks)**
(i). Afforestation/reforestation — trees and vegetation protect the soil from direct impact of rainfall and reduce surface runoff.
(ii). Terracing — terraces reduce the speed of runoff on sloping land.
(iii). Contour ploughing — ploughing across the slope reduces runoff and soil removal.
(iv). Planting cover crops — vegetation protects the soil surface from erosion.
(v). Strip cropping — strips of crops/grass reduce the speed of flowing water.

(e) Any two:**(2 marks)**
(i). Parent rock
(ii). Climate
(iii). Relief/topography
(iv). Living organisms
(v). Time
(vi). Vegetation

8. (a)**(2 marks)**
(i). **Internal forces:** forces originating from within the Earth's interior.
(ii). **External forces:** forces operating on or near the Earth's surface and originating mainly from external agents.
(b) Any three:**(3 marks)**
(i). Folding
(ii). Faulting
(iii). Vulcanicity/volcanism
(iv). Earthquakes

(c) Any two explained:**(2 marks)**
(i). Weathering breaks down rocks into smaller particles, contributing to the formation of soil.
(ii). Weathering weakens and disintegrates rocks, changing the shape and appearance of the Earth's surface.
(iii). Weathering prepares rock materials for transportation and deposition by agents of erosion.

(d) Any two:**(2 marks)**
(i). Volcanic mountain/cone
(ii). Crater
(iii). Caldera
(iv). Lava plateau
(v). Lava dome

SECTION C (30 MARKS)

Candidate was required to answer any two (2) questions among the three (3) questions.

9. Benefits of wildlife conservation to Tanzania

INTRODUCTION (1.5 marks) — brief explanation of the concept of wildlife conservation.

MAIN BODY (Six points @2 marks = 12 marks)

(i) Earns foreign exchange through tourism.
(ii) Creates employment opportunities (game rangers, tour guides, hoteliers).
(iii) Promotes development of infrastructure (roads, airstrips, hotels) near conservation areas.
(iv) Preserves biodiversity/genetic resources for research and future generations.
(v) Promotes international relations/co-operation through tourism and research.
(vi) Source of government revenue through park fees and licences.
(vii) Promotes environmental conservation/ecological balance. (Any six)

CONCLUSION (1.5 marks) — any relevant conclusion.

10. Negative impacts of mining

INTRODUCTION (1.5 marks) — brief explanation of mining as an economic activity in Tanzania.

MAIN BODY (Six points @2 marks = 12 marks)

(i) Environmental degradation/land destruction.
(ii) Pollution of water, air and soil.
(iii) Displacement of people/loss of land and property.
(iv) Poor/unsafe working conditions and accidents in mines.
(v) Conflicts between miners, government and local communities.
(vi) Depletion of non-renewable mineral resources.
(vii) Child labour and exploitation of workers. (Any six)

CONCLUSION (1.5 marks) — any relevant conclusion.

11. Characteristics of nomadic pastoralism

INTRODUCTION (1.5 marks) — brief explanation of the concept of nomadic pastoralism.

MAIN BODY (Six points @2 marks = 12 marks)

(i) Involves continuous movement of people with their livestock in search of pasture and water.
(ii) There is no permanent settlement/home.
(iii) It involves keeping of large herds of livestock (cattle, goats, sheep, and camels).
(iv) It is practiced mainly in semi-arid areas with unreliable rainfall.
(v) It uses simple/traditional methods of livestock keeping (low technology).
(vi) The whole family often moves together with the herds.
(vii) Production is mainly for subsistence rather than commercial purposes. (Any six)

CONCLUSION (1.5 marks) — any relevant conclusion.
