THE CATHOLIC DIOCESE OF TANGA

TANGA CATHOLIC SECONDARY SCHOOLS UNION (TACASSU)

FORM FOUR JOINT PRE-NATIONAL EXAMINATION 1

036/2 INFORMATION AND COMPUTER STUDIES 2

(PRACTICAL)

Time:3 Hours **2026**

Instructions

wazaelimu.com

1. This paper consists of **three** questions.
2. Answer **two** questions only.
3. Save your work on the desktop in the folder named by your examination number.
4. Save your work by using the 2003 or higher version of MS Office software you are using.
5. Check whether the **printed** works are similar to the **soft copy** of your work.
6. Submit the printed hard copy together with the soft copy of your work.
7. Cellular phones and any other unauthorised materials are **not** allowed in the examination room.
8. Write your **examination number** in a header part of your soft-copy work(s).

1. Use HTML codes to design the two webpages for RUAHA NATIONAL PARK as shown below:

First page

RUAHA NATIONAL PARK

Ruaha National Park is one of the country's most outstanding wilderness area. It is the second largest National Park, covering an area of 20,226 square kilometres located in South-Central Tanzania. During the dry season, when game viewing is at its best, animals are drawn to the Great Ruaha River and other water sources. The name Ruaha was derived from the Hehe word called "Luhava" meaning the great river.

Second Page

RUAHA NATIONAL PARK

Postal Address:P.O BOX 369,IRINGA

E-Mail:ruaha@tanzaniaparks.com

Phone:+25568906233,+25578906233

HOME PAGE

Description of the webpage

(a) Step 1: After creating two pages, now link the word 'Contact Us' in the Home Page to the Contact page.

(b) Step 2: Link the word 'Home Page' in the contact page to the home page.

(c) Step 3: Save the two pages again. Save the first page as index.html and the second page as contact.html.

(d) Step 4: Preview the home page using any web browser and test whether the link works.

(e) Print your work.

2. The school requires a secure gateway for students to access their accounts. You are required to develop both "User Login" and “Sign Up”.

   (a) Using basic HTML codes, create a file named **login.html** and implement the interface with the following specifications:

Logo

USER LOGIN

Username:

Password:

SIGN IN CLEAR

Forgot Password?

(i) Set the page background colour to light grey.

(ii) Use a table to centre the form on the page with a width of 300, a border of 1, and a white background colour.

(iii) Insert a placeholder image at the top of the table to serve as the logo.

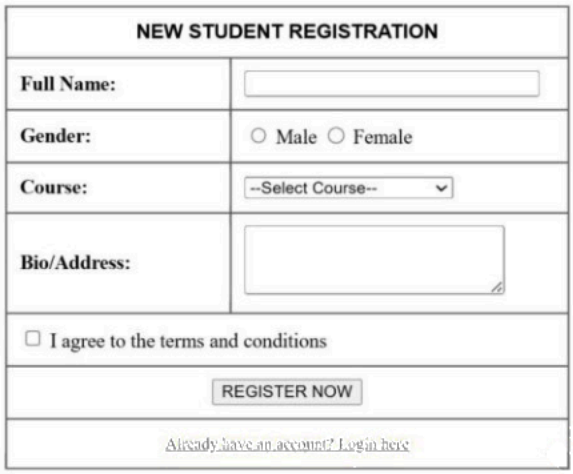

(iv) The heading "USER LOGIN" should be centred.

(v) Create input fields for Username (text type) and Password (password type).

(vi) Add two buttons: SIGN IN (submit type) and CLEAR (reset type).

(vii) Add a hyperlink at the bottom labelled "Forgot Password?" using a smaller font size.

(b) Using basic HTML codes, create a file named **signup.html** and implement the interface in the given snapshot with the specifications given.

(c) Page Layout: Set the page background colour to light grey.

(d) Container: Use a table to centre the form on the page with a width of 450, a border of 1, and a white background colour.

(e) Header: Create a table row where the heading "NEW STUDENT REGISTRATION" is centred and spans across both columns.

(f) Form Fields:

(i) Full Name: Create a standard text input field.

(ii) Gender: Implement radio buttons for "Male" and "Female".

(iii) Course: Create a drop-down menu with a default "″--Select Course--″" option.

(iv) Bio/Address: Use a text area with 3 rows for multi-line input.

(v) Confirmation: Include a checkbox labelled "I agree to the terms and conditions".

(vi) Actions: Add a centred "REGISTER NOW" submit button and a hyperlink to the **login.html** page at the bottom labelled "Already have an account? Login here."

3. The managing director of "Mwanga Hospital" intends to migrate the facility's manual patient and billing records into an electronic database to improve operational efficiency. You have been recruited as a database specialist to develop a prototype of the system.

(a) Launch a database management software and create a new database file named MWANGA_HOSPITAL.

(b) Design two tables with the following specifications and relationships. Establish a one-to-many relationship between PATIENT.PatientID and BILLING.PatientID. Ensure appropriate data types and primary keys are assigned.

PATIENT TABLE	BILLING TABLE
PatientID	Bill_Ref_No
NationalID	Bill_Date
FullName	Consultant_Fee
Ward_Type	Lab_Costs
Gender	Medicine_Cost
Date_of_Admission	PatientID
Age	

(c) Implement the following Field Properties and Validation Rules:

(i) The Ward_Type should only accept "Private", "General", or "ICU". Display an error message: *"Invalid ward selection."*

(ii) The Age field must not accept any value less than 0 or greater than 120. Display a message: *"Check age entry."*

(d) Create a data entry form for each table. Use the forms to enter the following records:

TABLE: PATIENT

PatientID	NationalID	FullName	Ward_Type	Gender	Date_of_Admission	Age
P-501	443322	Mary Atieno	General	Female	12/03/2024	34
P-502	445511	John Kamau	Private	Male	15/03/2024	45
P-503	448800	Ali Hassan	ICU	Male	20/03/2024	29

P-504	442299	Rose Chebet	Private	Female	22/03/2024	52

TABLE: BILLING

Bill_Ref_No	Bill_Date	Consultant_Fee	Lab_Costs	Medicine_Cost	PatientID
B10	14/03/2024	2,000	1,500	3,200	P-501
B11	18/03/2024	5,000	4,200	7,800	P-502
B12	25/03/2024	8,500	12,000	15,000	P-503
B13	28/03/2024	5,000	2,100	4,500	P-504

(e) Data Analysis and Output:

(i) Create a query named PatientBillingQuery to display the fields FullName, Ward_Type, Bill_Date, Consultant_Fee, Lab_Costs, and Medicine_Cost.

(ii) In the query above, create a calculated field named Total_Bill that sums the Consultant_Fee, Lab_Costs, and Medicine_Cost.

(iii) Generate a report based on the PatientBillingQuery. Group the report by Ward_Type and show the average Total_Bill for each group. Save the report as HospitalBillingReport.

(iv) Print your document.
