TANZANIA HEADS OF ISLAMIC SCHOOLS COUNCIL
FORM FOUR INTER ISLAMIC MOCK EXAMINATION

036/1 INFORMATION AND COMPUTER STUDIES I — SUGGESTED ANSWERS & MARKING SCHEME

Tuesday, 1st September 2026

Note: This is a suggested marking guide prepared from the question paper. Examiners should accept any other correct, relevant answers expressed in the candidate's own words.

SECTION A (16 Marks)

Question 1 — Multiple Choice (10 marks: 1 mark each)

Item	Answer	Reason
(i)	C — Information	Information is the result of processing raw facts (data).
(ii)	C — Backing up the file	A backup keeps a copy that can be restored if files are lost or damaged.
(iii)	A — =IF(C2>=75,"A",IF(C2>=65,"B",IF(C2>=45,"C",IF(C2>=30,"D","F"))))	Tests the MARKS column (C) from highest to lowest; gives 56→C, 52→C, 68→B, 80→A exactly as in the table. Other options test column D or use wrong operators.
(iv)	B	4th generation used microprocessors; 5th generation focuses on Artificial Intelligence.
(v)	D — Cache Memory	High-speed memory on/near the CPU that temporarily holds frequently used data.
(vi)	B — Driver software	Translates OS instructions for specific hardware (printers, scanners, graphics cards).
(vii)	E — Macro	Automates repetitive tasks and event-driven logic without complex programming.
(viii)	A — <frameset>	Used in legacy HTML to split the browser window into frames, each loading a separate HTML page.
(ix)	E — Mechanical data processing	Uses simple machines (typewriters, hand-operated calculators) plus human effort.
(x)	D — Organisational email address	Uses the college's own domain; more professional, secure and centrally controlled.

Question 2 — Matching (6 marks: 1 mark each)

LIST A	Answer
(i) Communication channel between the user and the application program	E — Status bar
(ii) Represents the current relative location of an insertion point	H — Vertical/Horizontal (scroll) bar
(iii) Buttons and icons that provide shortcuts to menu-bar commands	C — Tool bars
(iv) Group of commands, each with a drop-down list	B — Menu bar/ribbon
(v) Used to make a document more attractive	F — Formatting toolbar

LIST A	Answer
(vi) Indicates the name of the document currently running	G — Title bar

Marker's note: items (i) and (ii) are sometimes keyed the other way round (status bar shows page/line position). Accept E for (ii) and H for (i) only if the school's notes define them that way.

SECTION B (54 Marks)

Question 3 — Excel (Kisesa Secondary School worksheet)

Assumed layout from the worksheet: A = Student Name, B = Gender, C = Class, D = Physics, E = Adv. Math, F = Comp Sci, G = Average, H = Grade, I = Position. Header in row 8, students in rows 9–17. Accept correct formulas using the candidate's matching cell references.

(a) Average as an integer [2 marks] (in G9, then copy down)

```
=ROUND(AVERAGE(D9:F9),0)
```

Also accept: =INT(AVERAGE(D9:F9)) or =ROUND((D9+E9+F9)/3,0). Award 1 mark for AVERAGE and 1 mark for ROUND/INT.

(b) Number of female students with grade A [2.5 marks]

```
=COUNTIFS(B9:B17,"FEMALE",H9:H17,"A")
```

(c) Number of all students with grade B [2.5 marks]

```
=COUNTIF(H9:H17,"B")
```

(d)(i) Meaning of #NAME? [1 mark]

Excel does not recognise text in the formula — usually a misspelled function name (e.g. =AVRAGE), an undefined range name, or text typed without quotation marks.

(d)(ii) How to fix it [1 mark]

Correct the spelling of the function / range name, or put text in quotes. Example: change =AVRAGE(D17:F17) to =AVERAGE(D17:F17).

Question 4 — Desktop Publishing (DTP)

(a) Three advantages of DTP over word processors [6 marks: 2 each]

- **Precise layout control** — text and images are placed in frames that can be moved and positioned exactly anywhere on the page.
- **Better handling of graphics** — easy to combine, layer, wrap and align many images and text blocks, ideal for brochures.
- **Ready-made templates and master pages** — professional designs that keep a consistent look across pages.
- **Professional printing support** — supports high resolution, colour separation (CMYK) and print-ready output for commercial printers.
- **Advanced typography** — fine control of fonts, kerning, columns and text flow between frames.

Any three well-explained points.

(b) Three publications created by DTP [3 marks]

Brochures, newsletters, magazines, posters, flyers, business cards, certificates, greeting cards, calendars, menus. *Any three.*

Question 5 — Videography

(a) Three types of shots based on framing [6 marks: 2 each]

- **Extreme wide / establishing shot** — shows the whole location (e.g. the village and the dancing ground) to set the scene.
- **Wide (long) shot** — shows the full body of the dancers and their surroundings.
- **Medium shot** — shows a dancer from the waist up; good for showing movement and expression.
- **Close-up shot** — shows a face, hands or a drum in detail to capture emotion.
- **Extreme close-up** — very small detail, e.g. beads, eyes or feet.

(b) Panning vs Tilting [3 marks]

Panning	Tilting
Camera rotates horizontally (left to right or right to left) on a fixed point.	Camera rotates vertically (up or down) on a fixed point.
Used to follow dancers moving across the scene or show a wide area.	Used to show height, e.g. from a dancer's feet to the face.

Question 6 — HTML

(a) Three important tags [3 marks]: <html>, <head>, <title>, <body> (any three; also accept <!DOCTYPE html>).

(b) Roles of the tags [6 marks: 2 each]

- **<html>** — root element; tells the browser the document is an HTML page and contains all other tags.
- **<head>** — holds information about the page (title, meta data, links to CSS) that is not shown in the page body.
- **<title>** — sets the title shown on the browser tab and in search results.
- **<body>** — contains all visible content: headings, paragraphs, images, links and tables.

```
<html><head><title>My Job Page</title></head><body>...</body></html>
```

Question 7 — Networking

(a)(i) Most suitable network: Local Area Network (LAN) [1 mark] + two features [2 marks]

- Covers a small geographic area (one hospital building/compound).
- High data transfer speed and low error rate.
- Privately owned and managed by the hospital.
- Allows sharing of resources such as patient records, printers and lab results.

(a)(ii) Router vs Switch [4 marks]

Router	Switch
Connects different networks (e.g. hospital LAN to the Internet).	Connects devices within the same network (LAN).
Works at the Network layer (Layer 3) and uses IP addresses.	Works at the Data Link layer (Layer 2) and uses MAC addresses.
Chooses the best path for data between networks (routing).	Forwards data only to the specific destination device.
Often provides NAT, firewall and DHCP.	Mainly increases the number of wired ports and reduces collisions.

(b) Why wireless networking is becoming popular [4 marks: 2 each]

- **Mobility** — staff can work from anywhere in the building using laptops, tablets and phones.
- **Lower installation cost / no cabling** — cheaper and faster to set up, especially in old buildings.
- **Easy to expand (scalability)** — new users are added without laying new cables.
- **Supports modern devices** — smartphones and IoT devices depend on Wi-Fi.

Question 8 — Google Forms

(a) Five steps to create and share the quiz [5 marks: 1 each]

- Sign in to a Google account and open Google Forms (forms.google.com); create a blank form.
- Open **Settings** and turn on **Make this a quiz** (enables automatic marking and immediate feedback).
- Add questions using the **Multiple choice** type and type the options.
- Click **Answer key** for each question: select the correct answer, assign points and add feedback.
- Click **Send** and share the quiz by link, email or class platform (e.g. Google Classroom/WhatsApp).

(b) Two advantages of interactive assessments [4 marks: 2 each]

- Automatic and instant marking saves the teacher's time.
- Students receive immediate feedback and learn from mistakes.
- Reduces paper and printing costs.
- Results are automatically recorded and analysed (charts, spreadsheets).
- Can be done anywhere and anytime on any device.

SECTION C (30 Marks) — Answer any TWO (15 marks each)

> *Marking guide for essays: Introduction 2 marks, five well-explained points 2 marks each (10 marks), Conclusion 2 marks, organisation/language 1 mark.*

Question 9 — Preparing and delivering an electronic presentation on drug abuse

Introduction: An electronic presentation is a set of slides made with software such as Microsoft PowerPoint or Google Slides to support a speech.

- **Plan and research the content** — collect correct facts on the dangers of drug abuse (health, education, family, law) from reliable sources.
- **Prepare an outline** — title slide, introduction, effects of drug abuse, prevention, conclusion and questions slide.
- **Design simple, clear slides** — choose a suitable theme, readable fonts (24pt+), few words per slide (6x6 rule) and contrasting colours.
- **Add multimedia** — relevant pictures, charts, short video clips and simple transitions/animations to keep the audience interested.
- **Rehearse and check equipment** — practise timing with speaker notes; test the computer, projector and sound before Parents' Day.
- **Deliver effectively** — face the audience, speak clearly, use a remote/clicker, avoid reading slides word for word, and allow questions.

Conclusion: Careful planning, good design and practice will make the message on drug abuse clear and memorable to parents and teachers.

Question 10 — Roles of ICT in creating, solving or describing five societal issues (Tanzania)

Introduction: ICT refers to tools such as computers, mobile phones, the Internet and broadcasting used to create, store and share information.

- **Health** — Mobile health services, e-health records and SMS reminders improve health care; e.g. Tanzania's GoT-HoMIS hospital management system and health campaigns via radio/TV.
- **Education** — E-learning and digital content reach more learners; e.g. online classes, Shule Direct, TIE online library, NECTA results online.
- **Economy and business** — Mobile money (M-Pesa, Tigo Pesa/Mixx, Airtel Money) and e-commerce make payments easy and create jobs.
- **Agriculture** — Farmers get weather updates and market prices by SMS and apps, increasing productivity.
- **Governance and public services** — E-government services save time and reduce corruption; e.g. TRA online tax payments, GePG, NIDA registration, e-Mrejesho.
- **Negative issues created by ICT** (accept as a point) — cyber crime, fraud messages, spread of false information and moral decay on social media; controlled by the Cybercrimes Act 2015.

Conclusion: ICT strongly shapes Tanzanian society; it should be used responsibly to maximise benefits and reduce its negative effects.

Question 11 — Why interactive multimedia is better than traditional methods

Introduction: Interactive multimedia combines text, images, audio, video, animation and simulations that learners can control and respond to.

- **Makes abstract concepts clear** — simulations show processes that cannot be seen easily (e.g. electric current, cell division, chemical reactions).
- **Increases motivation and attention** — sound, animation and video make lessons interesting compared to chalkboard notes.
- **Safe virtual experiments** — dangerous or expensive laboratory experiments can be done virtually without risk or cost of chemicals.
- **Immediate feedback** — online assessments mark instantly, helping students and teachers identify weaknesses quickly.
- **Supports different learning styles and pace** — visual, auditory and hands-on learners all benefit; students can repeat content at their own speed.
- **Easy updating and sharing** — digital content can be updated and shared with many students at once, anytime and anywhere.

Evaluation / Conclusion: Although multimedia requires computers, electricity and trained teachers, its benefits in understanding, engagement and results justify the school's decision. It works best when combined with good teaching.

— END OF MARKING SCHEME —
