INFORMATION AND COMPUTER STUDIES 2024
DETAILED EXPLANATIONS - SECTION B AND SECTION C

QUESTION 3: MALWARE ON HEADMASTER'S COMPUTER

Meaning of Malware:
Malware means Malicious Software. It is a harmful program created to damage a computer, steal information, or make a computer system work incorrectly.

Warning signs of malware infection:

1. Slow computer performance:
A computer infected with malware may become slow because malware uses computer resources such as RAM and CPU without permission.

Example:
A headmaster tries to open Microsoft Word, but it takes a long time to start.

2. Frequent system crashes:
The computer may freeze, restart itself, or close programs unexpectedly because malware can damage important system files.

Example:
A computer restarts while preparing student reports.

3. Pop-up messages and unknown programs:
Malware may display unwanted advertisements or install unknown programs.

Causes of malware infection:

1. Downloading software from untrusted websites.
2. Failure to update antivirus software.
3. Using infected flash disks without scanning.

Prevention measures:

1. Install and update antivirus regularly.
2. Educate users about safe internet usage.
3. Perform backups and system updates.

==========

QUESTION 9: IMPACTS OF MULTIMEDIA TECHNOLOGY IN TANZANIA

Meaning of Multimedia Technology:
Multimedia technology is the use of text, images, audio, video and animation together to communicate information.

1. Improvement of education:
Multimedia supports e-learning, digital libraries and interactive teaching.
Students can use online videos, digital books and presentations to understand lessons.

Example Tanzania:
A student can use a smartphone to watch educational videos and improve learning.

2. Improvement of communication:
Multimedia supports social media, video conferencing and instant messaging.
People can communicate using text, images, audio and video.

Example:
Students from different regions can discuss using WhatsApp or video calls.

3. Growth of entertainment and employment:
Multimedia supports film production, music and gaming industries.
It creates jobs such as video editing, graphic design and content creation.

Example Tanzania:
Artists use digital cameras and editing software to produce music videos.

4. Improvement of services:
Multimedia improves health services, banking and customer care.

Example:
People can use mobile banking applications and online services without visiting offices.

CONCLUSION:
Multimedia technology contributes to social and economic development by improving education, communication, entertainment and service delivery.
