SECTION A [25 MARKS]

Answer all question from this section

1. Choose the most correct answer.
   i. What is the primary distinction between data and information?
      A) Data is more meaningful than information.
      B) Information is processed, interpreted, and organized data.
      C) Information is raw and unprocessed, while data is organized.
      D) There is no difference; data and information mean the same thing.
   ii. How does data relate to information in the communication process?
      A) Data is the end product of the communication process.
      B) Information is generated by interpreting and processing data.
      C) Data and information are unrelated.
      D) Information is always unprocessed, while data is always processed.
   iii. Which of the following is an example of a primary source of information?
      A) A news article summarizing a scientific study
      B) A personal diary or autobiography
      C) A textbook explaining historical events
      D) A research paper written about an experiment
   iv. Which of the following would be considered a secondary source of information?
      A) A first-hand interview with a historical figure
      B) A biography written about a famous person
      C) A letter written by a historical figure
      D) A newspaper article detailing an event as it happens
   v. Which of the following is a traditional method of disseminating information?
      A) Sending emails
      B) Television news broadcasts
      C) Using face-to-face meetings
      D) Publishing content on a blog
   vi. Which communication medium is best suited for instant, direct interaction between two people?
      A) Radio broadcast
      B) Email
      C) Telephone call
      D) Printed newsletter
   vii. What is the primary function of a computer's central processing unit?
      A) To store and retrieve data
      B) To process and execute instructions
      C) To display images and text on the screen
      D) To receive input from external devices
   viii. What is the primary function of a keyboard when interacting with a computer?
      A) To display information
      B) To capture and input data through typing
      C) To store files
      D) To control the computer’s visual output
   ix. When using a mouse, what does the left-click action typically do?
      A) It opens a program
      B) It selects or highlights an item
      C) It moves the cursor
      D) It closes a window
   x. What is the main purpose of a scanner in a computer system?

A) To input physical documents and convert them into digital form
B) To output printed copies of digital files
C) To store large amounts of data for later retrieval
D) To process and execute commands

2. Match each concept in **Column A** with the most appropriate description from **Column B**.

COLUMN A (Concepts)	COLUMN B (Descriptions)
i. Switching the Computer On ii. File Management iii. Virus iv. System Software v. Antivirus vi. Application Software vii. Folders viii. Security Management ix. Operating System x. Error Handling	A. The software that manages computer hardware and provides a platform for running application software. B. Software designed for specific tasks like document editing, browsing, or graphic design. C. A program that controls and coordinates the activities of hardware and software in a computer. D. The process of powering up a computer, initializing hardware, and loading the operating system. E. Techniques used to detect, diagnose, and correct problems in software or hardware. F. The organization, storage, retrieval, and manipulation of digital files and folders. G. The implementation of measures to protect data, user accounts, and system access. H. Virtual containers used to group and store multiple related files on a computer. I. A malicious program designed to replicate itself and cause harm to a computer system. J. A security tool designed to detect, prevent, and remove malicious software from a computer.

3. Complete the following table by filling in the missing information about computer generations:

Generation	Main Technology Used	Characteristics	Example Computer
First (1940–1956)	Vacuum Tubes	[a]	[b]
Second (1956–1963)	[c]	Smaller, faster, and more reliable than first-generation computers	IBM 1401
Third (1964–1971)	Integrated Circuits (ICs)	[d]	IBM System/360
Fourth (1971–Present)	[e]	Development of personal computers (PCs), introduction of the internet	Apple Macintosh
Fifth (Present and Beyond)	Artificial Intelligence (AI)	[f]	[g]

SECTION B [60 MARKS]

Answer all question from this section

4. You are given the following Sales Report Table. Answer the questions that follow.

	A	B	C	D	E
1	**Salesperson**	**Region**	**Sales (TZS)**	**Target (TZS)**	**Performance (%)**
2	John	North	1,200,000	1,500,000	
3	Mary	South	900,000	1,200,000	
4	Alex	East	1,600,000	1,400,000	
5	Linda	West	1,100,000	1,300,000	
6	Peter	Central	950,000	1,100,000	

Questions

a) Write the correct formula to calculate the Performance (%) for John in cell E2.

Given: Performance (%) = (Sales / Target) x 100

b) Write a formula to determine the average performance of all salespeople in column E.
c) Write a formula to find the highest sales figure from the Sales (TZS) column.
d) Describe the steps you would follow to apply conditional formatting to highlight salespersons whose performance is below 80%.
e) Write a function that would you use to count the number of salespersons in the table.
f) Why is it important to use formulas instead of manual calculations in Excel?

5. a) You need to ensure that the network can recover quickly in case of failure.
   i. What backup systems or redundancy measures would you implement to ensure business continuity?
   ii. How would you design the network to support minimal downtime?

   b) Given that all devices will be connected via wired Ethernet,
   i. Explain how the network speed might change as more devices are added to the network.
   ii. What network components would you consider upgrading to maintain performance?
   iii. How would these upgrades impact the overall network design?

6. With examples, explain the following terms
   a) Search engine
   b) HTML tags
   c) Hyperlink
   d) HTML attribute
   e) HTML form

7. Database concepts:
   a) Describe the different types of relationships that can exist between tables in a relational database.
   b) What are the main functions of a DBMS in organizing and managing data?
   c) Explain the concepts of Primary Key and Foreign Key in a relational database.

8. Presentation concepts
   a) What is the presentation program?
   b) Differentiate between animations and transitions as applied in Ms. Power point.
   c) Describe three precautions which should be taken when adding animations to a presentation.
   d) Describe four step that will guide you to open Ms. Power point.

9. A local business, Tanzanite Fashion Designers, is launching a new clothing line and wants to create an eye-catching brochure to promote its latest collection. The brochure should include high-quality images, well-formatted text, and an attractive layout. The company wants the brochure to be visually appealing, easy to read, and professionally designed using Desktop Publishing (DTP) software such as Microsoft Publisher.

   The company has provided the following details for the brochure:
   - The company logo must appear on the front page.
   - The theme colors should match the brand identity (blue and gold).
   - The text should be formatted using different font styles and sizes for headings and body text.
   - The images of the clothing designs should be arranged neatly with proper alignment.
   - The brochure should have two columns per page for better readability.
   - The final design should be exported in PDF format for printing.

   Questions:
   a) What is Desktop Publishing (DTP), and why is it important in designing a business brochure?
   b) Identify three DTP software that could be used to create the brochure.

c) Explain two features of DTP software that will help in designing an attractive brochure for Tanzanite Fashion Designers.
d) Why is it important to use high-quality images when designing the brochure?
e) Suggest two layout design principles that should be followed to ensure the brochure is visually appealing and easy to read.
f) What file format is best for printing the final brochure, and why?
g) The designer wants to add drop caps to the brochure's introduction. Explain how drop caps enhance the appearance of text.

SECTION C [15 MARKS]
Answer all question from this section

10. A government agency in your country is working on a project to expand internet access to rural areas. However, some community members do not understand the benefits and risks of using the internet. You have been asked to write an essay to educate them.

Hints:

- What the internet is and why it is important in today's world.
- Three specific benefits of the internet in education, communication, and business.
- Two major disadvantages of the internet.
- Three practical ways people can use the internet safely and responsibly.

Your essay should have an introduction, well-structured body paragraphs, and a conclusion with clear explanations and relevant examples.
