MsomiBora.com

1. You are provided with specimen T1, prepare the solution T2 from specimen T1 following the bellow procedures;
   i. Grind 5 pieces of specimen T1 using mortar and pestle
   ii. Place the grinded specimen T1 into a beaker and pour about 30mls of water in it
   iii. Stir the mixture and filter it by using a sieve to make a solution known as solution T2
   iv. Using the provided reagents conduct a food test experiment to identify the food components present in solution T2.
   v. Record your experiment using the table as shown below;

Food Tested	Procedures	Observations	Inferences

a) What are the food substances identified in solution T2?
b) One of the identified food substance its digestion starts in mouth, name the food substance and give the name of enzyme and food substance formed after its digestion
c) One of the identified food substance contained in solution T2 is important for child development;
   i. Name the food substance
   ii. Where digestion of this food does takes place in alimentary canal?
   iii. In each part name the enzyme involved in the digestion

2. You have been provided with specimen T3, T4, T5, T6
a) Identify the specimen T3, T4, T5 and T6
   i. Give the common names of the identified specimens
   ii. Classify the identified specimens to phylum/division level

b) State four importance of specimen T3 to human life

c) Observe specimen T5 and T6 carefully
   i. Give three differences between specimen T5 and T6
   ii. Name the reproductive structures found in underside of the leaf of specimen T6
d) Draw a well labelled diagram of specimen T4 and label the structures enable it to survive in its environment
