FORM FOUR MOCK EXAMINATION
(ACTUAL PRACTICAL)

033/2A **BIOLOGY 2A**

TIME: 2½ HOURS **YEAR: 2024**

Instructions

1. This paper consists of two (2) questions.
2. Answer all questions.
3. Each question carries twenty five (25) marks.
4. All writing must be in blue or black ink except for diagram that must be drawn in pencil.
5. Cellular phones and any unauthorized materials are not allowed in the examination room.
6. Write your examination number on every page of your answer booklet.

MsomiBora.com

1 You are provided with the solution D 1, three test tubes, heat source, test tube racks, chemicals and reagents. Carry out the experiment as directed in the procedure (I)- (viii)

PROCEDURES

i. Take 2mls of solution D 1 and put into three test tubes labeled as test tube 1, test tube 2, and test tube 3.

ii. Add three drops of iodine solution in the test tube1

iii. Then shake well

iv. Add equal volume of Benedict solution in the test tube 2

v. Then heat the mixture gently for 5 minutes

vi. Add equal amount of sodium hydroxide solution in the test tube 3

vii. Then followed by 3 drops of Copper (ii) sulphate

viii. Observe what is happening

QUESTIONS

a) What is the aim of the experiments

b) What did you observe in the test tube 1, test tube 2, and test tube 3?

c) Which food substances are present in the test tube 1, test tube 2, and test tube 3?

d) Why the colour of Benedict solution turns into Orange colour?

e) In which test tube the food substance present is used for building the body?

f) Each food substance has its own role in the body. Give the role of food present in test tube 2.

g) After ingestion the food undergoes digestion. Outline the end products of the food identified in the test tube 1, 2 and test tube 3.

h) Give the disorder of the food substance identified in the test tube 3 when it is insufficient in child.

i) What is the effect of food identified in the test tube 1 when present in excess amount in the body?

j) In the process of digestion it involves chemicals and enzymes. Name all enzymes responsible for digestion of food identified in the test tube 3 when in the stomach?

2 You have been provided with specimens A, B, C, E, F, and G. Study them carefully and then answer the questions that follow;

a) What are the type of germination exhibited by specimen A and specimen B

b) In which ways do specimen A and specimen B differ? Any 3 points

c) Draw a well labeled diagram of specimen A

d) Name specimen C, E, F and G by using their common name.

e) Describe the observable difference between specimen C and specimen F. Any 3 points

f) How important is specimen C in our daily life? Any 3 points

g) Where can specimen G be found?

h) Classify each specimen A, B, C, E, F, and G to class level.
