PRESIDENT'S OFFICE
REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT

MOROGORO MUNICIPAL COUNCIL

FORM THREE TERMINAL JOINT EXAMINATION

CODE: 033 BIOLOGY

TIME: 3HRS MAY, 2025

INSTRUCTIONS:

wazaelimu.com

1. This paper consist of A, B and C
2. Answer all questions in Sections A, B and only two (2) questions from section C
3. All writings should be in blue or black Ink, except for diagram that must be drawn in pencil.
4. Cellular phone are not allowed in the examination room
5. Write your examination number on every page of you answer sheet

SECTION A (15 Marks)

1. For each of the following items (i)-(x) choose the most answer from among the given alternatives and write in the box provided

   i. A head office was educating the villagers about communicable disease and the mentioned the following diseases as example of communicable disease
      A. Cholera, meningitis and marasmus
      B. Tuberculosis, malaria and scurvy
      C. Scabies, influenza and diabetes
      D. Cholera, meningitis and Tuberculosis
      E. Cancer, Asthma and scabies

   ii. Mr. Ndemanga's son went to the hospital to ask for treatment due to outward banding of his leg is bones.
   This may be resulted by deficiencies of;
      A. Vitamin D
      B. Vitamin C
      C. Vitamin B
      D. Vitamin A
      E. Lipid

   iii. Mr. Masunga's daughter is suffering from kwashiorkor which food will you recommend to them?
      A. Milk, groundnuts, beans and meat
      B. Milk, Cassava, Sorghum and wheat
      C. Cabbage, Spinaches, Cassava and eggs
      D. Sorghum, Cassava, rice and yams
      E. Maize, bananas and sweat potatoes

   iv. A person bite by a snake is advised not to take alcohol, why?
      A. Because can bite by another snake again
      B. Since the ant- venom won't work
      C. He wants assists professionals to identify snake type
      D. Since will increase heart rate and spread of venom
      E. Because can bite by another big snake

   v. Human body is very sensitive to both internal and external changes that can be explain in different ways which of the following is termed as allergy
      A. Body reaction to antigen that do not bother most people
      B. Body reaction against a specific drug
      C. Body reaction against a disease causing micro organism
      D. Accumulation of mucus by inhaling dust particles
      E. Formation of rasher caused by eating specific food

vi. Vascular plant has the specialized tissue for transportation of materials in different parts of the plant. Example what will happen if phloem tissues is destroyed in green plants

A. Absorption of water in plant body will stop
B. Absorption of minerals salts and water will stop
C. Transpiration of manufactured water and food will stop
D. Transportation of manufactured food will stop
E. Transport of oxygen in plant will stop

vii. During respiration which substance is produced in mammals when food substance especially glucose is broken down in absence of oxygen

A. Alcohol
B. Lactic acid
C. Carbon monoxide
D. Oxygen
E. Ethanol

viii. The third step in the scientific procedure is

A. Experimentation

B. Collecting data

C. Identification problem

D. Formulating hypothesis

E. Conclusion

ix. After drinking bear a woman was seen to urinate frequently. What is the relationship between drinking beer and frequent urination?

A. Beer adds more water to the tissue
B. Beer contain alcohol which relaxes the urinary bladder muscles
C. Beer contain alcohol which interferes with the function of anti-diuretic hormone (ADH)
D. Frequent urination avoid getting drunk
E. Beer transport large volume of water to the kidney

x. Why it is advised to build an incinerator in every hospital or health center?

A. For collecting wastes

B. For burning hazardous waste

C. For disposing liquid waste

D. For disposing plastic materials

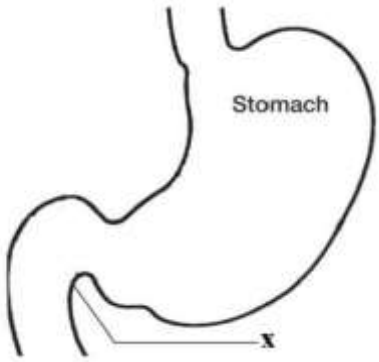

E. For keeping small animals

2. Match the description of the List A with their corresponding in List B by writing the letter of the correct responses beside the item number in answer sheet provided.

LIST A	LIST B
i. A point where two bones meet and movement may occur ii. A type of muscle that bends a joint iii. A slippery substance that reduces friction in joints iv. A tough tissue that connects bones to other bones v. A tissue that prevents bones from rubbing against each other vi. A muscle that straightens a joint	A. Locomotion B. Skeleton C. Joint D. Extensor E. Flexor F. Synovial fluid G. Antagonistic muscles H. Cartilage I. Ligament J. Tendon K. Skeleton

SECTION B (54 Marks)

3. Study simple diagram below carefully and answer the questions that follows.

a) Identify part X
b) What will happen if the part M is severely damaged and fail to perform its role (state three points)
c) Why salivary amylase (ptyalin) can not perform hydrolysis in the stomach?
d) Briefly explain why pepsin is secreted in inactive form

4. a) Assume your biology teacher has asked you to state the roles of heart in the circulatory system, how will you respond that question? (Use three points)

   b) Briefly explain how the structure and function of vascular tissues contribute to plant survival in different environments (use three points)

   c) Explain how the malfunction of transport systems in human can affect body function and health (Give three points)

5. a) How explain HIV/AIDS weakens the immune system and increases the vulnerability to opportunistic infections

   b) Assess the impact of life style factors such as nutrition, stress and sleep on the effectiveness of the immune system

   c) How would you tabulate the differences between active immunity and passive immunity (give three points)

6. a) What do you understand the term Anaerobic respiration

   b) Explain three effects of smoking on the structure and function of the human respiratory system

   c) Write the chemical equation representing Aerobic respiration in mammals

7. a) Suppose you were in the class during biology session, your teacher brought maize seedling and bean seedling that were used to explain different concepts concerned with those seedling. As a competent student taking biology subject explain.

      i) How do they differ (three points)
      ii) How are they advantageous in your daily life? (three points)

   b) Explain the importance of biological classification in understanding biodiversity (three points)

8. a) Tow potted plants A and B were placed in the school laboratory for observations. Plant A was placed in a room with unilateral source of light and another plant B grown on land soil but when touched it closes its leaves

      i. What kind of response was shown by each plant A and B?
      ii. Differentiate the response shown by each plant A and B?

   b) In three points, state why the plants do not locomote as animals?

SECTION C (30 Marks)

9. As a young biologist in your village, help your people by explaining all scientific methods (Procedures) to be followed in solving any problem which might face them so that they can be aware for finding solution by their own.

10. Assume you are invited to participate on world farmer's day in your village and you are asked to talk about "biology" for development of agriculture and medicine farmer's voice" prepare and write a speech in assay form concerning the potential of biology in Agriculture and medicine field (give three points)

11. Briefly explain why breast feeding is more preferable than to bottle feeding (give five points)
